

Function Analogy

Directions:

Create an analogy where you compare an everyday object to a function.

•On your paper, tell what the function item is as well as what the input and output should be. Use the statement, “A _____ is like a function because the input is _____ and the output is _____.” Be creative, but make sure it makes sense.

•Include an image to illustrate your function.

Example:

A blender is like a function because you input fruit and output smoothies.
